

# iPad Laser Scanning – Field to Office Workflows

Andy Putch – CEO at SiteScape

Sam Tijan – Senior Virtual Construction Specialist  
at Miron Construction Co., Inc.

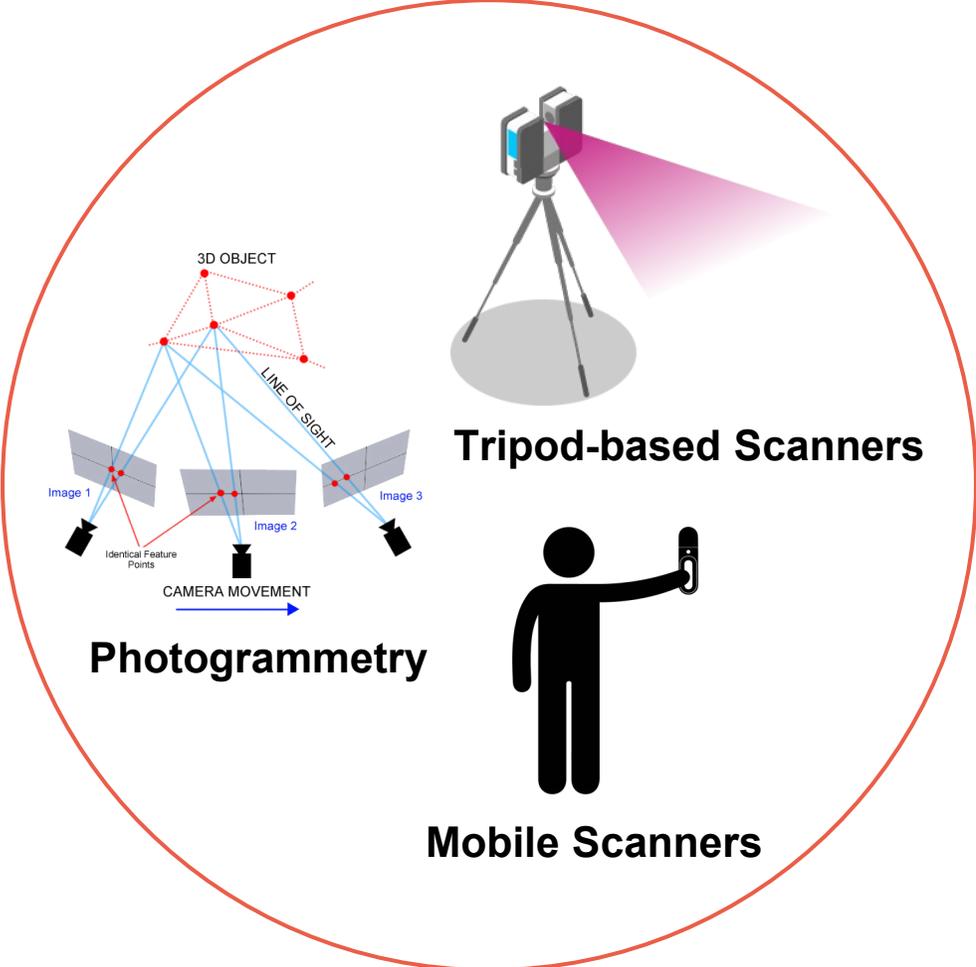

# Andy's Backstory

Product Manager at  DroneDeploy

A drone base photogrammetry platform for the enterprise

# Existing Reality Capture Solutions

# Is There Really LiDAR On the iPhone?

## SPECS

Solid State, Direct-Time-of-Flight LiDAR sensor

Simultaneous Localization and Mapping (SLAM) System

Depth sensor range: 15 feet (5 meters)

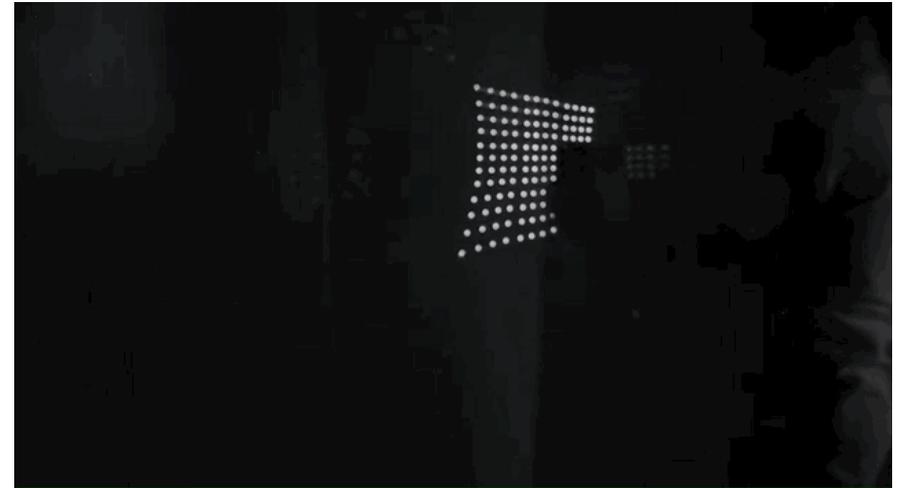

Depth sensor resolution: 256 x 192 pixels (0.05 MP)

## LIMITATIONS

SLAM system location estimate is susceptible to drift accumulation over time

Point-to-point measurements generally accurate to +/- 1" for scans of areas up to 1,000 sqft

# But What About Accuracy?

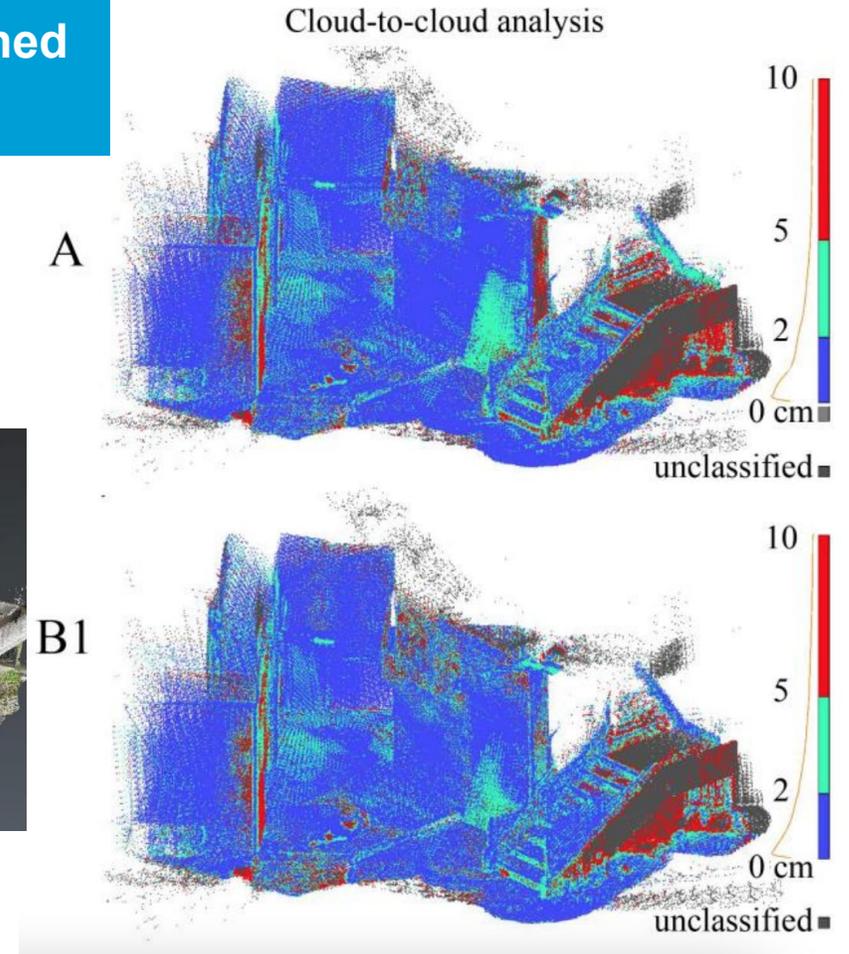

Study by Laboratory of Geomatics for Cultural Heritage, published in the ISPRS Journal of Photogrammetry & Remote Sensing

Point cloud	5 GCPs		4 CPs	
	RMS mean (cm)	St. dev. (cm)	RMS mean (cm)	St. dev. (cm)
(A) iPad - Single scan	1.8	0.7	1.8	0.8
(B1) iPad - raw scans	1.9	0.6	1.5	0.7
(B2) iPad - edited scans	1.9	0.6	1.4	0.6
(C) Faro	0.2	0.1	0.3	0.1

**Table 5.** Evaluation of the point clouds positioning accuracy: RMS values on GCP/CP.

Point cloud	Cloud to cloud distance		
	0-2 cm	2-5 cm	5-10 cm
(A) iPad - single scan	61%	29%	10%
(B1) iPad - raw scans	70%	24%	6%
(B2) iPad - edited scans	76%	21%	3%

**Table 8.** Evaluation of the positioning through ICP algorithm to the TLS scans by means of cloud-to-cloud distance without considering portion where gross errors appeared in the previous analysis.

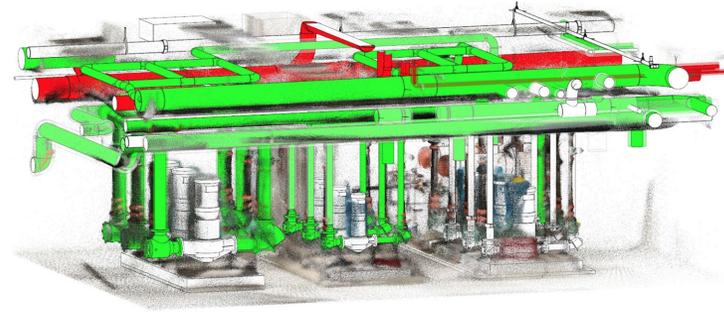

# SiteScape for AEC

A **mobile & cloud platform** for capturing 3D scans of jobsite conditions

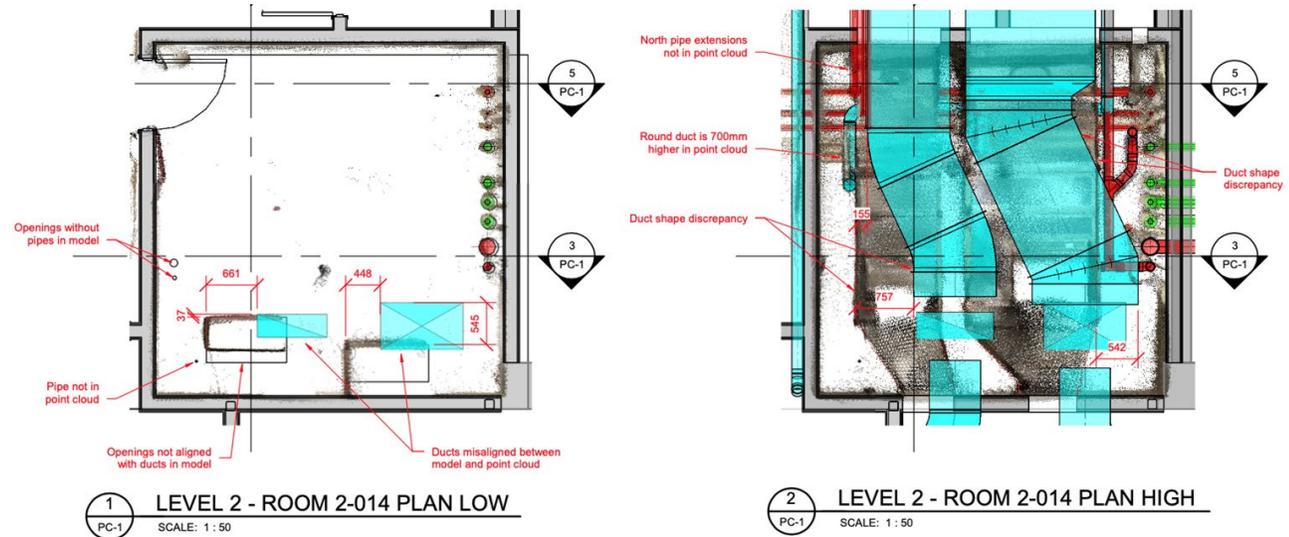

1. Document, share, & troubleshoot problems on site

2. Model existing conditions

3. Verify as-builts & produce record drawings

# Democratizing the Technology

## Field Data Collection

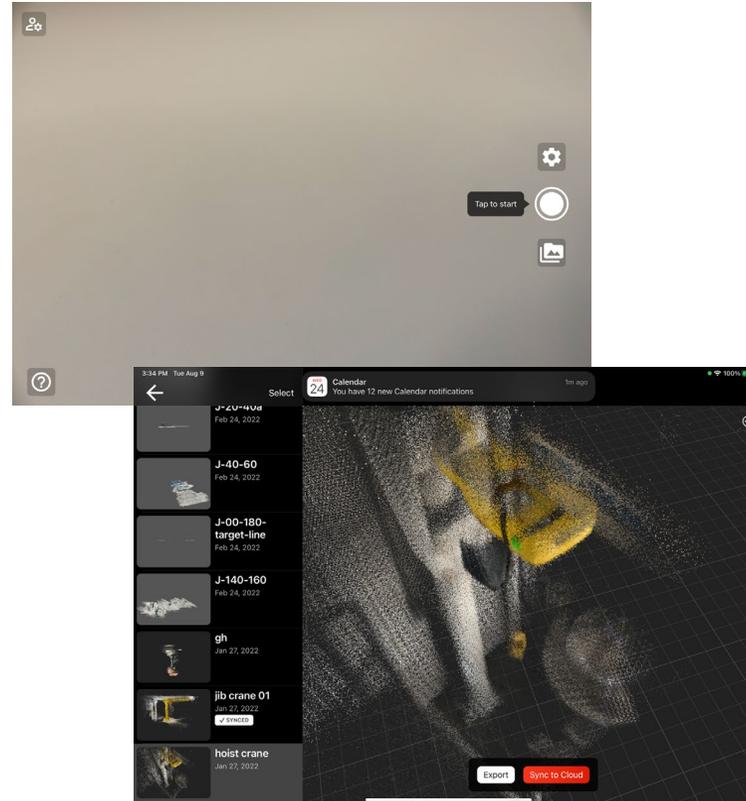

- Software Operation / Training
- Data collection integrity
- Data deliverable to Coordination Team

# Software Operation & Training

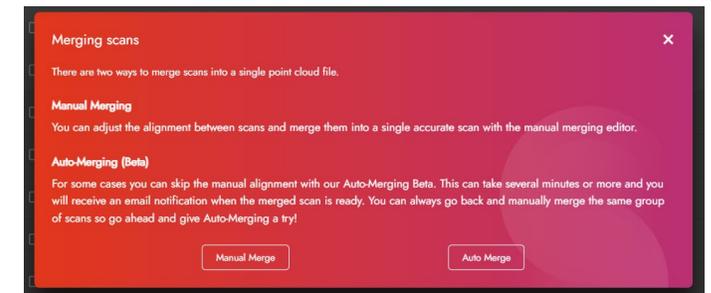

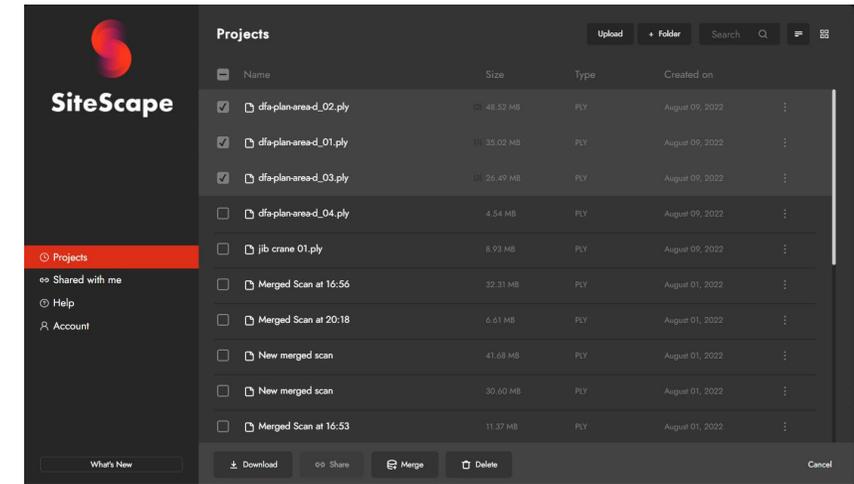

## What Tools?

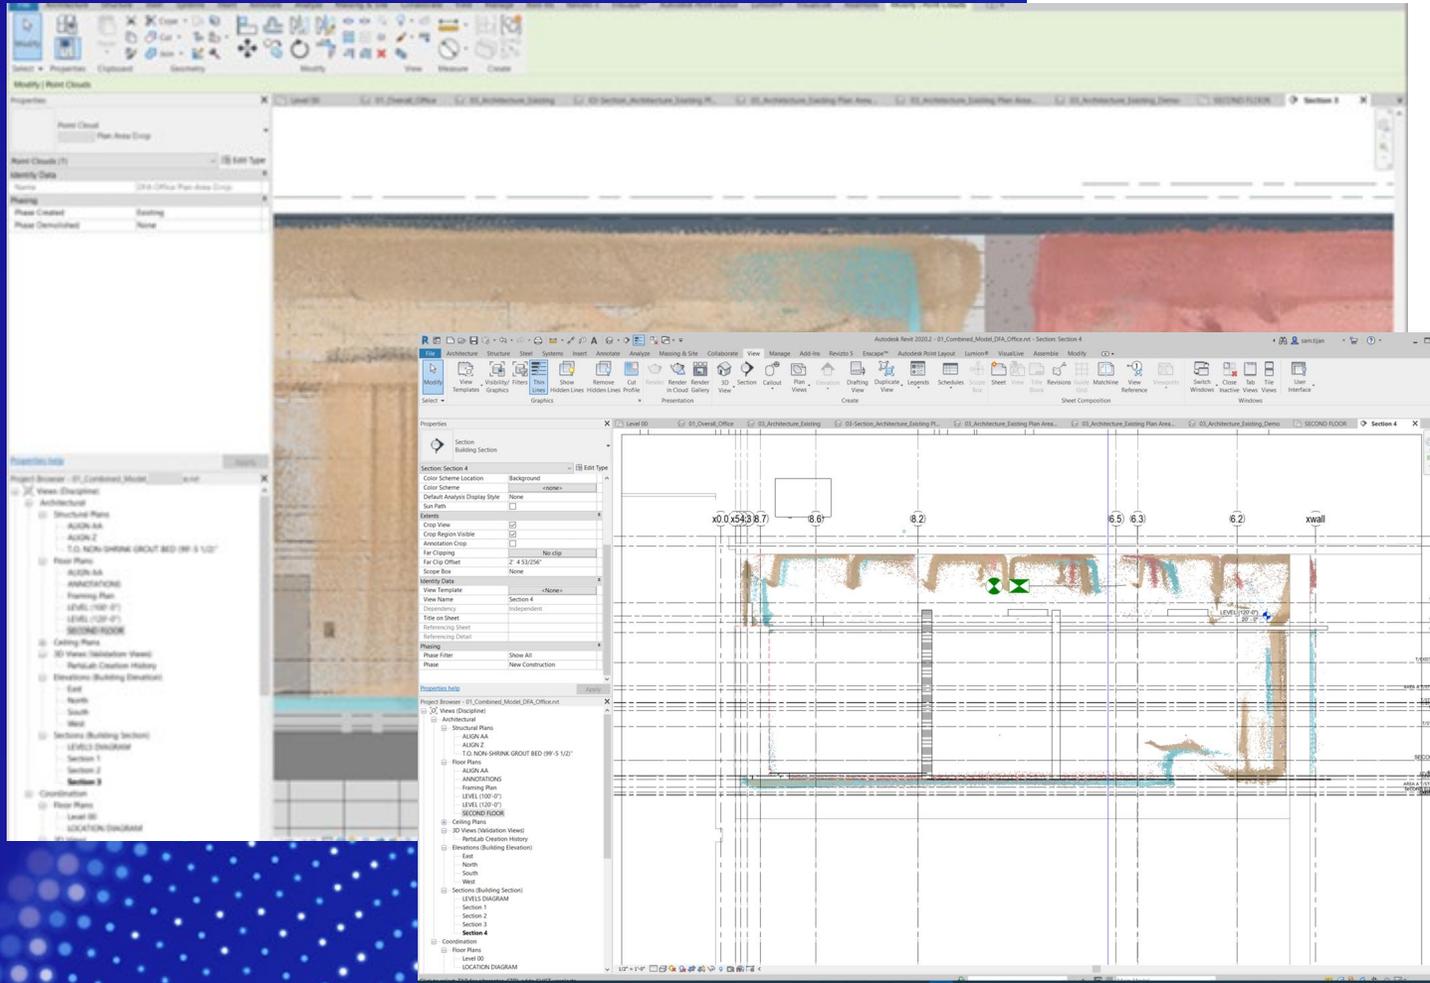

## Application Interface & Data Collection

## Check Data & Make Available to VC Team

# Model Workflow

- Point Cloud Data conversion
- BIM Coordination
- Use in Design or Fabrication Model

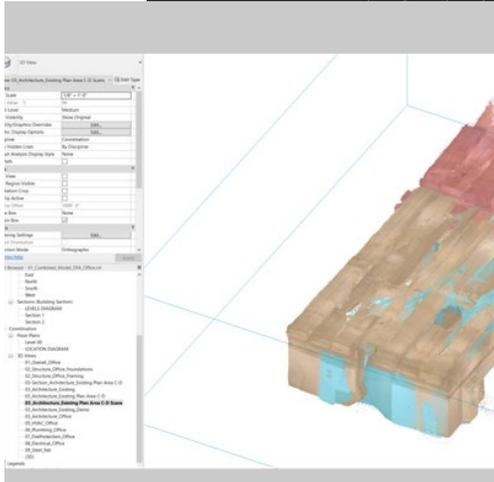

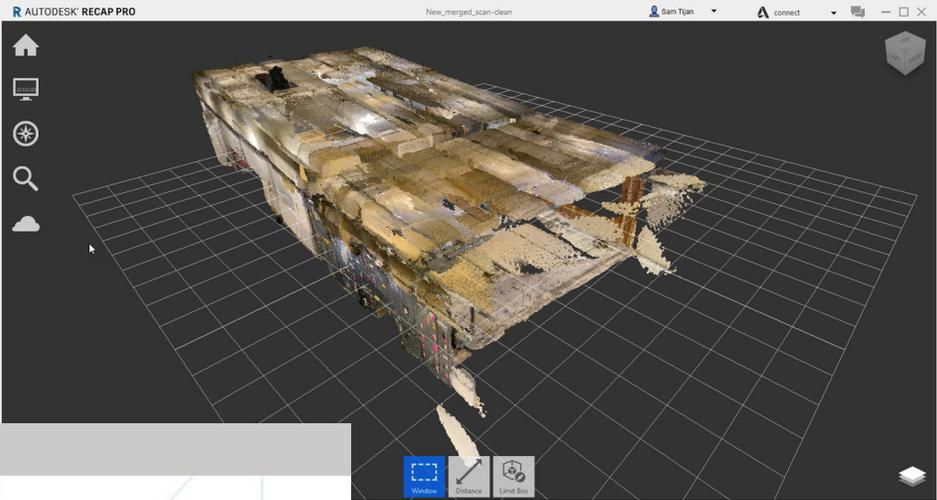

# Point Cloud Conversion

## Merging and Downloading Point Clouds

The screenshot shows the SiteScape web interface. On the left is a navigation menu with 'Projects' selected. The main area displays a table of projects:

Name	Size	Type	Created on
dfa-plan-area-d_02.ply	49.52 MB	PCL	August 01, 2022
dfa-plan-area-d_01.ply	35.02 MB	PCL	August 01, 2022
dfa-plan-area-d_03.ply	20.47 MB	PCL	August 01, 2022
dfa-pl...			
jfb crs...			
Merge...			
Merged Scan at 20:18	6.61 MB	PCL	August 01, 2022
New merged scan	41.58 MB	PCL	August 01, 2022
New merged scan	32.60 MB	PCL	August 01, 2022

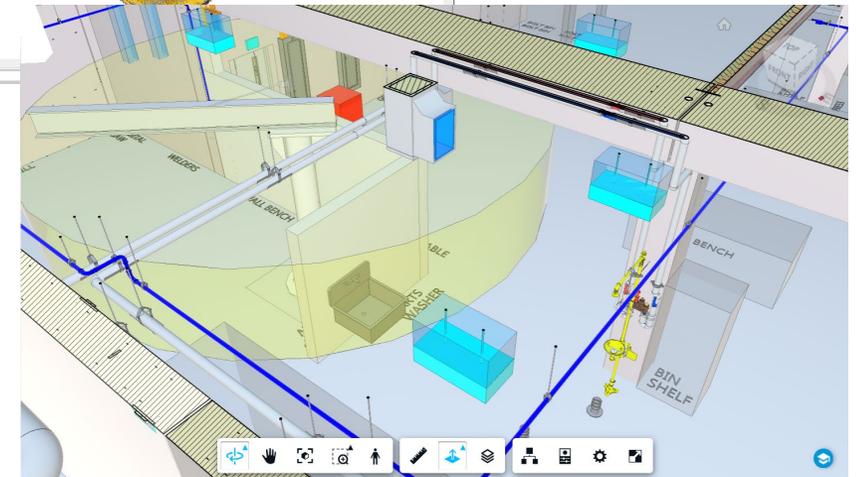

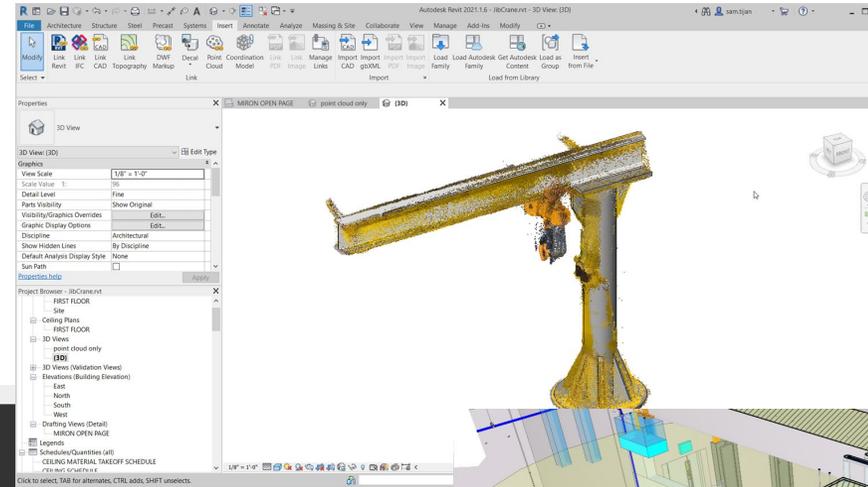

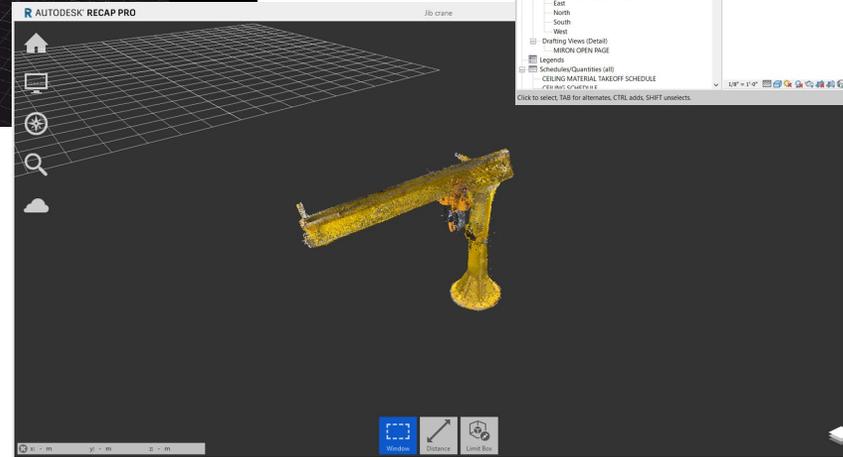

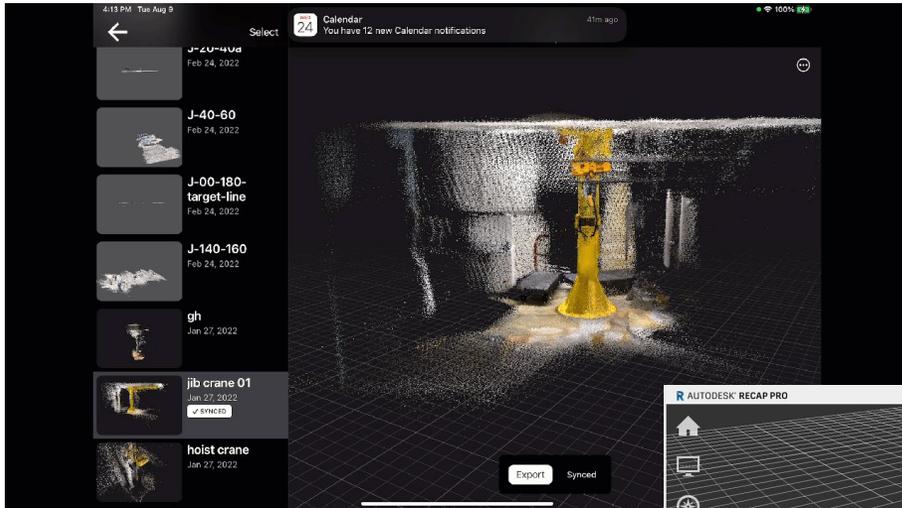

A modal window titled 'Download New merged scan' is open, asking to 'Please select a format' with buttons for 'PLY', 'RCP', and 'E57'. Below the modal is a confirmation page with the SiteScape logo and the text 'Your Scans are Ready!'. It includes a 'Download files' button and social media links.
